

Grow More Fruit Fuel 16-8-24

- Designed for fruiting trees, shrubs, and annual vegetables.
- Full-spectrum of secondary and micronutrients, including Calcium and Magnesium.
- Sufficient phosphate level without overstimulating the plant.
- Not recommended for blueberries.

Dissolve in water before using.

→ For periodic feeding throughout the growing season.

- Plants in pots: About once per month add 1 teaspoon per gallon of irrigation water applied to the plants.

Example: the dosage for a potted plant receiving 1 quart of irrigation water each week is ¼ teaspoon per month dissolved in the quart of irrigation water at the beginning of each month.

- Plants in ground with drainage: About every 3 months add 1 tablespoon per gallon of irrigation water applied to the plants.

Example: suppose a tree in the ground with a 36 sq.ft. basin receives ½" of rainwater per week; i.e. 10.2 gallons of water per week. The 3 month dosage ≈ 10.2 tablespoons dissolved in water to distribute in the basin.

→ For monthly periodic foliar: use 1/4 teaspoon per gallon of water applied to the plants.

→ For continuous fertigation: 5 lbs / 1500 gallons yields about 63 ppm N, 32 ppm P, 95 ppm K.

Dosages assume no other fertilizer is applied.

GUARANTEED ANALYSIS		FRUIT FUEL	
Total Nitrogen (N)	16.00%	Boron (B)	0.02%
4.4% Ammoniacal Nitrogen		Copper (Cu)	0.05%
